LAKE NAIVASHA

Lake Naivasha is a beautiful freshwater lake, fringed by thick papyrus. The lake is almost 13kms across, but its waters are shallow with an average depth of five metres. Lake area varies greatly according to rainfall, with an average range between 114 and 991 sq kms. At the beginning of the 20th Century, Naivasha completely dried up and effectively disappeared. The resulting open land was farmed, until heavy rains a few years later caused the lake to return to existence, swallowing up the newly established estates.

Afternoon wind and storms can cause the Lake to become suddenly rough and produce high waves. For this reason, the local Maasai christened the lake Nai'posha meaning 'rough water'. The lake and its surroundings are rich in natural bounty, and the fertile soils and water supply have made this one of Kenya's prime agricultural regions. Much of the lake is surrounded by forests of the yellow barked Acacia Xanthophlea, known as the yellow fever tree.
